

Putting People First.

Technology doesn't always make you more nimble. That's where we come in. We make seemingly difficult systems more agile, flexible and user friendly so you can be nimble.

“NimbleUser” What's in Our Name

NimbleUser is more than just a name; it's how we think and act; we know the technology, of course, but what makes us different is how **we make that technology work for you** — to make your organization more **effective** to your members and make your staff more **efficient** in how they fulfill members' needs and expectations.

Who We Are

People first

- It's not about the technology, its about the **USERS**—people like you!

Integration Specialists

- Our forte is making systems talk to one another, work together and actually play nice.

Support

What You Can Expect From Us

Nimble Project Management: It's designed so we stay on budget, on time and on task and so you know where you are at all times, including what we may need from you to proceed to the next step.

Conversational Tone: At NU, we strive to speak in layman's terms so you can not only understand the decisions you'll be faced with but can trust that we've outlined the possible impact those decisions will have on today and tomorrow.

Integration Specialists: NU serves a variety of associations and nonprofits with counsel that is based on our experiences (good, bad & the ugly), of BOTH Association Management Software and Web Development. We work with both systems under one roof and know the intricate subtleties of each system.

Partnership: Together we'll work to make your association or nonprofit more efficient, effective and nimble.

How Can We Help You?
